CLIPPER BRUSH SERIES

Introducing the **Clipper Brush** series. The Clipper series of brush allows you to tune your brushes for the needs of your motor and track. Compounds for on road and off road are available, and for both standard and laydown brush systems.

The slots allow for increased cooling under heavy load conditions. They create three contact legs which may be clipped off to tune your brush for your motor's need and race conditions. *For example:*

- a) Use full size for 1:10 2WD off road and 1:10 on road.
- b) Clip one leg off for 1:12 modified, stock motors, and 1:10 on road tracks that are open type tracks.
- c) Clip two legs off for 1:12 stock motor racing.

The above combinations are only a few of the tuning applications of these brushes.

CLIPPER BRUSH SERIES

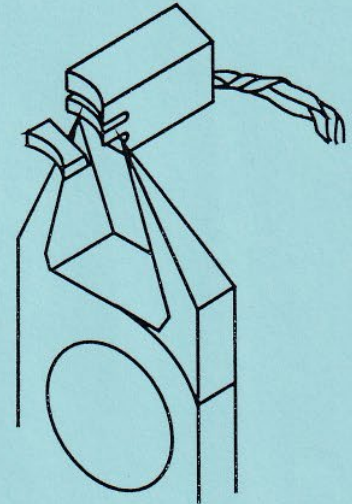

#733 For standard brush systems and on road or stock motor use. pair, \$4.50

#734 For standard brush systems and off road motor use. pair, \$4.50
