

REEDY Modifieds

REEDY COMPETITION BATTERIES. POWERING WORLD CHAMPIONS SINCE 1982

Starting in 1995, Reedy Modifieds and Team Orion combined efforts in the areas of international/national racing, and development of new battery technology. This joint effort, which has powered every current IFMAR electric World Champion, has led to the development of **Voltage Maximizing** technology and equipment. This equipment, used exclusively by Reedy Modifieds and Team Orion, increases the voltage without hurting the capacity or life of the battery. This technology is available exclusively through Reedy Modifieds "Zappers" batteries and Team Orion "V-MAX" batteries.

Look for Reedy **Zappers** battery packs incorporating Voltage Maximizing technology

New Reedy Zappers

All Reedy Zappers receive treatment on the **Voltage Maximizing** system. Zappers and Zappers "WC" cells are then cycled and precision matched for voltage and capacity, before being packaged and shipped out. **All Reedy Zappers use Sanyo SCRC cells.**

#640 NOVA ZAPPERS, SIX CELL, \$65.00

Unmatched. Economical high voltage performance batteries. Each cell goes through the voltage treatment process, giving you high voltage cells in a Sport type pack.

#642 REEDY ZAPPERS, SIX CELL, \$90.00

High voltage processed, cycled, and matched. Recommended for stock class racing and four minute off road competition.

#643 REEDY ZAPPERS, SEVEN CELL, \$105.00

#644 REEDY WC ZAPPERS, SIX CELL, \$120.00

Premium high voltage cells, cycled and matched. Recommended for on road racing and truck competition.

Reedy batteries have supplied the power source for seventeen World Championships. All four current IFMAR electric World Championships were won by drivers using Reedy batteries.

Mike Swauger, 1996-98 1:10 On Road World Champion

Matt Francis, 1995-97 2WD World Champion

Mark Pavidis, 1995-97 4WD World Champion

Masami Hirotsuka, 1996-98 1:12 World Champion

Reedy Modifieds motors and batteries have powered more World Champions than all the other manufacturers combined.

REEDY Modifieds

REEDY COMPETITION MOTORS.

POWERING WORLD CHAMPIONS SINCE 1982

Reedy Modifieds has been the choice of power for 17 IFMAR World Championships, including a current clean sweep of all four electric racing divisions.

R&D plays an important part in the development of any competition product. At Reedy Modifieds our R&D program not only encompasses a lot of

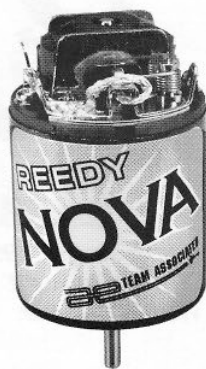

homework in the motor lab, but our racing program plays a large part in developing products for the racer. Input from our World Championship racing team along with many hours of R&D allows us to furnish the racer with the latest in race-proven competition motors.

SONIC
Large Commutator/laydown brush motor for high current off road racing.

ULTRA SONIC
Small commutator/standard upright brush motor for on and off road racing.

NOVA
Hand wound, economical motor for on and off road racing.

SONIC2
The newest off road motor from Reedy Modifieds, this motor features a large commutator with a vibration absorbing brush system, 1.4mm can material, high strength/temperature magnets.

TRI-SONIC
The newest on road motor from Reedy Modifieds, this motor was used to win both the 1:12 and 1:10 IFMAR World Championships. Tri-Sonic motors feature vibration absorbing brush systems, 1.4mm can material, high strength/temperature magnets.

FIREHAWK
stock motor ROAR '96 24 degree stock motor featuring: vibration absorbing brush system, small commutator/laydown brush, 1.4mm can, split lamination armature.
