RC10T TRUCK

In late 1990 the popularity of truck racing grew rapidly, rules were established by ROAR and NORRCA for a truck class, and truck conversion kits were becoming common. After looking at the newly established rules and trucks in use, our designers decided that they could develop an entirely new truck that would take advantage of the new rules and surpass the handling of the market's then-leading truck kits.

Our design team of Roger Curtis, Cliff Lett and Curtis Husting started with the proven race-winning features of our RC10 Team Car and developed from there. Starting with our aluminum chassis we developed an entirely new front end and steering servo saver. We kept our Stealth transmission for power and traction, and hard anodized Teflon coated shocks to control the suspension. Results? It won the 1991, 1992 & 1994 NORRCA Nationals and 1992 & 1994 ROAR Nationals, as well as being voted *R/C Car Action* magazine's Truck of the Year twice.

RC10T TEAM TRUCK

Associated's RC10T Team Truck is the premier, state-of-the-art 1:10 scale electric off road truck kit. It borrows the most important features of the World Championship-winning RC10 Team Car, like the ball bearing Stealth transmission, the hard anodized, Teflon-coated race-winning shocks and aluminum chassis, and adds all-new features for durable truck racing. This truck includes many track-tuning and race-winning features, such as 30 degree front caster blocks, new heavy duty shock towers and black composite suspension arms, lightweight wheels, hard anodized Teflon shock pistons and internal assembly parts, universal dogbone rear axles, and new rear arm mounts and hub carriers. A slightly narrower body improves performance. All of the above are in addition to the excellent parts from the original RC10T. They are just refinements to give the racer the most adjustable, quality race truck available.

#7035, \$335.00

RC10T SPORT TRUCK

This level race truck has what it takes to win. It has the same durable components as our Team Truck (no downgrading of important parts), but to bring down the cost we used bronze bushings, dogbones and stub axles and our original gold anodized shocks. To help keep the overall cost down for our customers we added a resistor speed control with variable forward and brakes (no reverse) and a competition stock motor. The only items needed to make this truck run is a radio, battery and battery charger. Add bearings and an electronic speed control and this truck can race alongside our Team Truck.

#7011, \$240.00
