

TC4 QUICK-START GUIDE

Before you start running your factory assembled TC4, review your Instruction Manual and this Quick-Start Guide.

Description	Problem	Solution
No power	Battery is discharged	Charge battery.
	Battery not plugged in	Plug battery in.
	No light on speed control	Reset speed control using your instruction manual.
No throttle	Motor not plugged in	Plug motor in.
	Speed control out of adjustment	Reset speed control using your instruction manual.
	Motor failure	Replace motor.
No steering	Servo not plugged in	Plug servo in.
	Locked up steering linkage	Examine and free up steering linkage.
	Servo failure	Replace servo.
Throttle	Goes backwards when you pull the trigger, or forward when pushing brakes/reverse.	Check throttle reversing switches on transmitter (refer to transmitter instruction manual). Reset speed control.
Steering	Goes right when turning the wheel left (or left when turned right)	Check steering reversing switches on transmitter (refer to transmitter instruction manual).
TC4 is glitching	TC4 has a problem on power	Check motor capacitors, loose wires, crystals, or worn motor brushes.
	TC4 takes off	Check for loose wires, dead radio batteries or loose crystals.
Reverse	No reverse or brakes	Reset speed control (refer to your speed control's instruction manual), or send in for repair.
TC4 dies or slows	Speed control overheats	Let speed control cool.
	Motor overheats	Let motor cool and check recommended gearing for motor type.
	Gear mesh set too tight	Reset gear mesh (see instruction manual).
