CLEAR CHASSIS PROTECTIVE FILM

ASSOCIATED'S clear protective sheet will help preserve the finish on your car's chassis. This clear adhesive sheet goes along with the Associated colored chassis to help keep the finish looking good for a long time.

INSTRUCTIONS: Before applying the adhesive sheet, make sure the bottom of your chassis is clear and free of oil and dirt. Line up the sheet so that you will be certain to have the nose of the chassis covered as well as the bottom. You will want to start at one end of the chassis and slowly work your way to the opposite end.

NOTE: The clear sheet sticks extremely well, so align the sheet carefully before you begin. Once you have applied the sheet, you can use an X-acto® knife to open up the mounting holes you need.
